Routing Overview for Iron Multi-page App video on Generating Templates

Server & Client Code

```
lib/routes.js

RouterConfig:
use layout: MasterLayout

route:  /
name:   home
use:    HomeControllerJS
where:  client
```

```
lib/controllers/HomeControllerJS

use:        MasterLayout
subscribe: todos
action:     render: Home
```
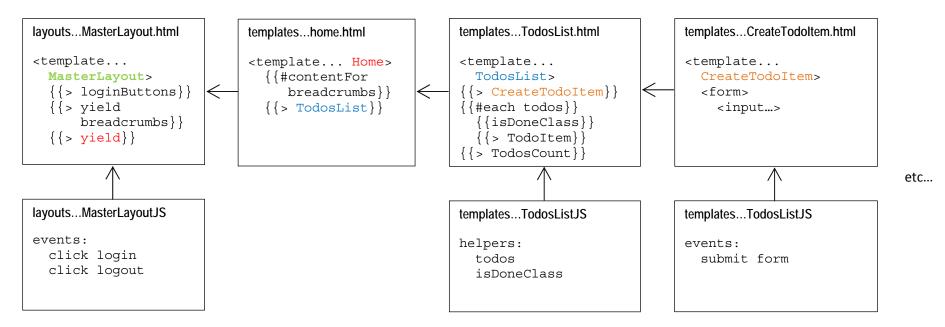

```
lib/collections/todos.js

Todos.allow(...)
Todos.deny(...)

[DB-write-control]
```

Server-only Code

```
server/publish.js

Publish(todos)...

[DB-read-control]
```

Client-only Code

```
layouts...MasterLayout.html

<template...
  MasterLayout>
  {{> loginButtons}}
  {{> yield
     breadcrumbs}}
  {{> yield}}
```

```
templates...home.html

<template... Home>
  {{#contentFor
     breadcrumbs}}
  {{> TodosList}}
```

```
templates...TodosList.html

<template...
  TodosList>
{{> CreateTodoItem}}
{{#each todos}}
  {{isDoneClass}}
  {{> TodoItem}}
{{> TodosCount}}
```

```
templates...CreateTodoItem.html

<template...
  CreateTodoItem>
  <form>
     <input…>
```

```
layouts...MasterLayoutJS

events:
  click login
  click logout
```

```
templates...TodosListJS

helpers:
  todos
  isDoneClass
```

```
templates...TodosListJS

events:
  submit form
```

etc…

Note: Iron generator auto-adjusts filename spellings and capitalization. They are approximated here for clarity.
